

Graduate school

The LMPS is attached to two Graduate Schools

Graduate school "Engineering and systems sciences"

The Graduate School "Engineering and Systems Sciences" offers training in the fields of engineering sciences and associated digital sciences. It covers several major themes that explore and develop new ways of designing, manufacturing, using and maintaining systems that will guarantee the ecological and economic development of our societies in the future.

Graduate School "Research and Higher Education professions"

The Graduate School "Métiers de la Recherche et de l'Enseignement Supérieur" provides a personalised "pre-doctorate + doctorate" approach to its training. It offers a space for exchange and a framework for experimenting with new, reinforced training courses and new practices, particularly inter- and multi-disciplinary. These courses are based on and complement the Master's degree courses of the disciplinary Graduate Schools, and lead to a double degree. They are closely linked to research laboratories which ensure that students have early and sustained contact with the research community.
